The PAX Index is an autocross handicapping system designed to allow comparison between the various SCCA Solo classes. The PAX numbers represent times that should be run by cars developed to the limit of the rules and driven by national caliber drivers. The PAX Index is updated each year to account for rule changes and is based on major events, including the SCCA Solo Nationals, where there are plenty of fully prepared cars in the hands of top quality drivers.

To use the Index, multiply a given time by the class index number to get an indexed time. For example, if a GS car runs a time of 40.576, its indexed time is 33.313 ($40.576 \times .821$). If on the same course, a BSP car runs a time of 39.199, its indexed time is 33.672 ($39.199 \times .859$). In this case, the GS competitor performed the best.
